COMMUNITY ORGANIZATION AND NATURAL RESOURCES MANAGEMENT

Course (3 hr) will cover ways to solve natural resources and environmental issues through participatory and collaborative approaches within communities.

- Analyze how communities operate in order to address local natural resources and environmental issues
- Understand the role of citizen-led participation and collaboration in solving such issues
- Learn how to determine community conditions, assess needs, and propose courses of action using different sources of information
- Learn how you can work with different community stakeholders in search of addressing natural resources and environmental issues
