

RWFM 484 INTERNSHIP

Connecting classroom learning to real-world experiences!

An internship is not just a stint on your resume; it's a transformative experience that combines classroom knowledge with practical skills in a professional environment. At the Department of Rangeland, Wildlife and Fisheries Management, we believe students gain invaluable experience, sharpen essential skills, and make meaningful connections through working in the field early on.

The Department is working to expand its partnerships with various private and public entities to offer students facilitated internships that will best develop career-specific credentials needed to stand out, post-graduation.
